

Significant reduction in labor hours
Easy cable system

IAI
Quality and Innovation

An industry first!

e-Wiring System

What is the e-Wiring System?

Run the bus cable and branch off the branch cables as needed to connect to the actuators.

Application example

ELECYLINDER transfer unit with 12 axes

This unit clamps workpieces at the tip of the ELECYLINDER's cartesian axis

Conventional wiring

Space for the cable carriers installation is needed

BEFORE

Power unit installation space is necessary inside the controller

The excess cables are coiled up

e-Wiring System

POINT

No cable carriers needed!

AFTER

Installing a 24V power supply within the work site helps save space in the control panel.
(Our PSA-24 can be installed in parallel with the on-site power supply unit)

No unnecessary cables!

Reduces labor hours at each stage from design to maintenance

Design

BEFORE

Requires selecting cable length for each actuator

AFTER

No need to select cable length

Reduces Design Time

Run the bus cable on the equipment and branch off the branch cables using dedicated connectors.

Assembling

BEFORE

Wiring work takes time because there are many cables

AFTER

Cable installation labor hours

Approx.

64% Reduced

Labor time of conventional wiring work
(Our actual measurement result)

124 minutes

Wiring labor time for the e-Wiring System

45 minutes

Maintenance

BEFORE

Multiple types of cable lengths are necessary for maintenance of each actuator

AFTER

Maintenance cables are significantly reduced to just two types

In addition!

- ✓ No need to purchase excessively longer cables, **saving resources!**
- ✓ Only the exact amount of cables are purchased, **reducing costs!**
- ✓ **Lower cost** due to shorter total cable length!

Can be cut to the required lengths

Instruction manual available!

Refer to the instruction manual for detailed connection instructions.
